

Recombinant Aequorea victoria EGFP Protein

Catalog No.: RPT0003

Recombinant

Sequence Information

Species Gene ID Swiss ProtAequorea P42212

victoria

Tags C-His

Synonyms

IGreen fluorescent protein;GFP;EGFP

Product Information

Source Purification

HEK293 cells >95% by SDS-

PAGE.

Endotoxin

< 0.1 EU/µg

Formulation

Lyophilized from a 0.22 μ m filtered solution of PBS, pH 7.4.Contact us for customized product form or formulation.

Reconstitution

Centrifuge the vial before opening.
Reconstitute to a concentration of
0.1–0.5 mg/mL in sterile distilled water.
Avoid votex or vigorously pipetting the
protein. For long term storage, it is
recommended to add a carrier protein or
stablizer (e.g. 0.1% BSA, 5% HSA, 10%
FBS or 5% Trehalose), and aliquot the
reconstituted protein solution to
minimize free-thaw cycles.

Background

GFP, also known as Green Fluorescent Protein, is a protein produced by the jellyfish (Aequorea Victoria) that produces bioluminescence in the green zone of the noticeable spectrum. Green Fluorescent Protein is a useful and ubiquitous instrument for producing chimeric proteins, where it functions as a fluorescent protein tag. GFP is expressed in most known cell types and is used as a noninvasive fluorescent marker in living cells and organisms. Green Fluorescent Protein permits a broad range of applications where it has functioned as a cell lineage tracer, reporter of gene expression, or as a measure of protein-protein interactions. Enhanced GFP (eGFP) has F64L and S65T mutations, which make GFP show increased fluorescence and fold more efficiently under 37°C.

Basic Information

Description

Recombinant Aequorea victoria GFP Protein is produced by HEK293 cells expression system. The target protein is expressed with sequence (Met1-Lys238) of aequorea victoria GFP (Accession #) fused with a 6×His tag at the C-terminus.

Bio-Activity

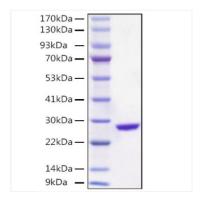

Storage

Store the lyophilized protein at -20°C to -80 °C for long term.

After reconstitution, the protein solution is stable at $-20\,^{\circ}\text{C}$ for 3 months, at 2–8 $^{\circ}\text{C}$ for up to 1 week.

Avoid repeated freeze/thaw cycles.

Validation Data

Recombinant Aequorea victoria GFP Protein was determined by SDS-PAGE with Coomassie Blue, showing a band at 25kDa.
