Background

Microtubule-dependent motor protein involved in the control of the oriented deposition of cellulose microfibrils. Involved in wall biogenesis and modification, and contributes to cell-cycle progression and cell division. Acts as a transcriptional activator in gibberellic acid (GA) biosynthesis pathway. Binds specifically to the DNA sequence 5'-ACCAACTTGAA-3' of the ent-kaurene oxidase 2 (CYP701A6 or OsKO2) promoter. May regulate CYP701A6 gene expression and mediates cell elongation by regulating the GA biosynthesis pathway
