Leader in Biomolecular Solutions for Life Science

SARS-CoV-2 Envelope Rabbit pAb

Catalog No.: A20199

1 Publications

Basic Information

Observed MW

Refer to figures

Calculated MW

8kDa

Category

Mouse Monoclonal Antibody

Applications

WB, ELISA

Cross-Reactivity

SARS-CoV-2

Background

Severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) is an enveloped, positive-sense, single-stranded RNA virus that causes coronavirus disease 2019 (COVID-19). Virus particles include the RNA genetic material and structural proteins needed for invasion of host cells. Once inside the cell the infecting RNA is used to encode structural proteins that make up virus particles, nonstructural proteins that direct virus assembly, transcription, replication and host control and accessory proteins whose function has not been determined.~ The structural proteins of SARS-CoV-2 include the envelope protein (E), spike or surface glycoprotein (S), membrane protein (M) and the nucleocapsid protein (N). The spike glycoprotein is found on the outside of the virus particle and gives coronavirus viruses their crown-like appearance. This glycoprotein mediates attachment of the virus particle and entry into the host cell. S protein is an important target for vaccine development, antibody therapies and diagnostic antigen-based tests.

Recommended Dilutions

WB 1:500 - 1:2000

Immunogen Information

Gene ID

43740570

Swiss Prot

P0DTC4

Immunogen

Recombinant fusion protein containing a sequence corresponding to amino acids 1-75 of coronavirus Envelope (YP_009724392.1).

Synonyms

spike glycoprotein; SARS-CoV-2 Envelope

Product Information

Source

Rabbit

Isotype

IgG

Purification

Affinity purification

Storage

Store at -20°C. Avoid freeze / thaw cycles.

Buffer: PBS with 0.01% thimerosal, 50% glycerol, pH7.3.
