Background

This gene encodes a serum protein found in association with the major histocompatibility complex (MHC) class I heavy chain on the surface of nearly all nucleated cells. The protein has a predominantly beta-pleated sheet structure that can form amyloid fibrils in some pathological conditions. The encoded antimicrobial protein displays antibacterial activity in amniotic fluid. A mutation in this gene has been shown to result in hypercatabolic hypoproteinemia.

Validation Data

Flow cytometry: 1×10^6 Daudi cells (negative control, left) and HeLa (right) were surface-stained with ABflo® 488 Rabbit anti-Human $\beta 2$ Microglobulin mAb (A24223, 5 μ l/Test, orange line) or ABflo® 488 Rabbit IgG isotype control (A22069, 5 μ l/Test, blue line). Non-fluorescently stained Daudi cells were used as blank control (red line).

Flow cytometry: 1×10^6 HeLa were surface-stained with ABflo® 488 Rabbit IgG isotype control (A22069, 5 μ l/Test, left) or ABflo® 488 Rabbit anti-Human $\beta 2$ Microglobulin mAb (A24223, 5 μ l/Test, right).
