#### **Basic Information**

#### **Observed MW**

55kDa

#### **Calculated MW**

61kDa

#### Category

Mouse Monoclonal Antibody

### **Applications**

WB,ELISA

#### **Cross-Reactivity**

Human, Mouse

### **Background**

This gene encodes a mitochondrially-localized protein that has sequence similarity to prokaryotic beta-lactamases. Many of the residues responsible for beta-lactamase activity are not conserved in this protein, suggesting it may have a different enzymatic function. Increased expression of the related mouse gene was found to be associated with obesity. Alternative splicing results in multiple transcript variants encoding different protein isoforms.
