Leader in Biomolecular Solutions for Life Science

Recombinant Human CD69 Protein

www.abclonal.com

ABclonal

Catalog No.: RP00077

Recombinant

Sequence Information

Species Gene ID Swiss Prot Human 969 Q07108

Tags C-His

Synonyms

CD69;AIM;BL-AC/P26;CLEC2C;EA1;GP32/28;MLR-3

Product Information

Source HEK293 cells Purification > 95% by SDS-PAGE.

Endotoxin

< 0.1 EU/ μg of the protein by LAL method.

Formulation

Lyophilized from a 0.22 µm filtered solution of PBS, pH 7.4.Contact us for customized product form or formulation.

Reconstitution

Centrifuge the vial before opening. Reconstitute to a concentration of 0.1-0.5 mg/mL in sterile distilled water. Avoid votex or vigorously pipetting the protein. For long term storage, it is recommended to add a carrier protein or stablizer (e.g. 0.1% BSA, 5% HSA, 10% FBS or 5% Trehalose), and aliquot the reconstituted protein solution to minimize free-thaw cycles.

Background

Early activation antigen CD69, also known as activation inducer molecule (AIM), is a single-pass type II membrane protein. Recently, cDNA clones encoding human and mouse CD69 were isolated and showed CD69 to be a member of the C-type lectin superfamily. It is one of the earliest cell surface antigens expressed by T cells following activation. Once expressed, CD69 acts as a costimulatory molecule for T cell activation and proliferation. In addition to mature T cells, CD69 is inducibly expressed by immature thymocytes, B cells, natural killer (NK) cells, monocytes, neutrophils and eosinophils, and is constitutively expressed by mature thymocytes and platelets. CD69 is involved in lymphocyte proliferation and functions as a signal transmitting receptor in lymphocytes, natural killer (NK) cells, and platelets. The structure, chromosomal localization, expression and function of CD69 suggest that it is likely a pleiotropic immune regulator, potentially important in the activation and differentiation of a wide variety of hematopoietic cells. This membrane molecule transiently expresses on activated lymphocytes, and its selective expression in inflammatory infiltrates suggests that it plays a role in the pathogenesis of inflammatory diseases. CD69 plays a crucial role in the pathogenesis of allergen-induced eosinophilic airway inflammation and hyperresponsiveness and that CD69 could be a possible therapeutic target for asthmatic patients.

Basic Information

Description

Recombinant Human CD69 Protein is produced by HEK293 expression system. The target protein is expressed with sequence (Ser 62 - Lys 199) of human CD69 (Accession #NP_001772.1) fused with a $6\times$ His tag at the C-terminus.

Bio-Activity

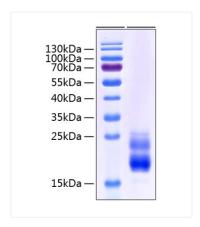

Storage

Store the lyophilized protein at -20 $^{\circ}$ C to -80 $^{\circ}$ C for long term.

Shr>After reconstitution, the protein solution is stable at -20 $^{\circ}$ C for 3 months, at 2-8 $^{\circ}$ C for up to 1 week.

Avoid repeated freeze/thaw cycles.

Validation Data

Recombinant Human CD69 Protein was determined by SDS-PAGE with Coomassie Blue, showing a band at 20-26 kDa.
