

Linear polyUb Chain-binding Protein Identification / Validation Kit

Catalog No.: RP10211K

Sequence Information

Species **Gene ID** **Swiss Prot**

Human
proteins

Tags

Synonyms

Product Information

Source **Purification**

E. coli recombinant 95% based on SDS-
PAGE

Endotoxin

Formulation

20 mM Tris, 150 mM NaCl, 2 mM βME,
10% Glycerol

Reconstitution

Background

This kit is designed for two purposes: 1) identification of proteins that specially bind linear polyUb chains in whole cell or tissue lysates; 2) validation of direct interactions between linear polyUb chains and their binding proteins. The non-cleavable 6xHis-tagged linear Ub6 is resistant of deubiquitination when incubating with whole cell or tissue lysates, thus allowing maximally capture proteins that specifically bind linear polyUb chains. After binding, 6XHis-tagged non-cleavable linear Ub6 and the binding proteins can be enriched with Nickel XPure Agarose Resin (included). The bound proteins and the non-cleavable polyUb chains can be eluted from Ni resin using a buffer containing 250 mM imidazole (included) or by incubating with TEV protease (not included). Either of the elution method can significantly reduce the amounts of non-specific binding proteins when compared with elution using SDS sample buffer.

Basic Information

Description

Bio-Activity

Storage

This product is stable at ≤ -70°C for up to 6 months from the date of receipt. For optimal storage, aliquot into smaller quantities after centrifugation and store at recommended temperature. Avoid repeated freeze/thaw cycles.
